HALIMA MANSURI

Full-Stack Developer — Python, FastAPI, SQL & Data Solutions

Ahmedabad, IN | 9016566733 | mansurihalima3@gmail.com | LinkedIn | GitHub | Portfolio

Full-Stack Developer with **3+ years** of experience building **Python** applications, **REST APIs** and data-driven solutions. Currently delivering **Python**, **Spark** and **Databricks data pipelines** and **FastAPI** backends (with Angular front ends) on EY risk consulting engagements, including ServiceNow-to-Delta-table **ETL**, reporting platforms and executive dashboards. Strong in **Python**, **Pandas**, **SQL** and **data transformation**, with a record of shipping secure, production-ready systems end-to-end — from data modeling and API design to testing, deployment and production support. Comfortable with ambiguity, working with business stakeholders and technical teams, and applying GenAI (LLMs, RAG) to practical problems.

SKILLS

Programming Languages: Python, **SQL**, JavaScript, TypeScript, PHP. • **Python & Data: Pandas**, **Spark**, **NumPy**, Data Analysis, **Data Transformation**, **ETL/ELT**-style pipelines, JSON flattening, Data Validation & Quality Checks, Data Visualization (Chart.js). • **Backend & APIs: FastAPI**, **Flask**, Node.js, Express.js, REST APIs, API Integration (ServiceNow), JWT, CORS, WebSockets/SocketIO. • **Frontend:** Angular, React.js, HTML, CSS. • **Database & Cloud: Azure SQL**, **SQL Server**, **Databricks** (SQL, notebooks, **Delta tables**), MySQL, SQLite, SQLAlchemy, MongoDB, AWS (EC2, S3). • **DevOps & Tools:** Git, GitHub, **Docker**, Linux, **CI/CD** (GitHub Actions), Postman, Swagger/OpenAPI. • **Practices:** Clean Architecture, Domain Driven Design, Code Reviews, Technical Documentation, End-to-End Testing, Production Support. • **AI & ML:** LLM, GenAI, RAG, MCP.

PROFESSIONAL EXPERIENCE

Full Stack Developer (External Contractor — EY Risk Consulting)

20 Aug 2026 - Present

Brisa Technologies, Ahmedabad, India — deployed on EY (Ernst & Young LLP) client engagements, Risk Consulting

Contributing to full-stack applications and data solutions using **Python**, **FastAPI**, **Pandas**, **Spark**, **SQL Server/Azure SQL**, **Databricks**, and Angular for internal and client-facing platforms across **3 projects**.

- **Data Pipelines & ETL:** Built an end-to-end data flow integrating **ServiceNow API** request and incident data into **2 Databricks Delta tables** using **Python** notebooks. Processed and transformed data using **Pandas** and **Spark**, flattened nested JSON into business-readable columns, resolved JSON parsing issues, and implemented **pagination** to handle large incident datasets.
- **Databricks & Data Transformation:** Used **Spark** to process and transform data for **Delta table** storage in **Databricks**. Validated transformed data and integrated Delta tables with backend **APIs** to support downstream reporting and dashboard requirements.
- **Python Backend & SQL Integration:** Updated **FastAPI** backend data access to read from Databricks Delta tables using **SQL** while maintaining compatibility with **100%** of existing API endpoints. Validated the **end-to-end data flow** from ServiceNow through Databricks and backend APIs to dashboards.
- **Performance & Reliability:** Investigated and resolved application responsiveness issues in a governance console by optimizing scripts across the backend and frontend. Addressed API pagination limitations affecting larger result sets.
- **Executive Dashboards & Data Visualization:** Enhanced Angular dashboards using **Chart.js**, including **6 DBU cost-consumption charts** (bar, line, and area), custom canvas data labels, tooltips, responsive KPI grids, scrollable tables (Top 20 users and jobs by cost), and improved navigation. Resolved Angular re-rendering issues affecting **Data Quality** Scorecard KPIs.
- **Internal Workflow Application:** Worked on an Angular, **FastAPI**, and **Azure SQL** application supporting timesheets, leave requests, and multi-level approvals for **3 user roles** (Creator, Approver, Admin). Validated database connectivity and authentication APIs, improved approval and leave workflows to update without page reloads, added pagination, and enhanced bulk approvals with a confirmation modal. Reviewed the codebase to document bugs and created a local **SQL Server** database for testing.
- **Reporting Platform:** Enhanced an Angular and **FastAPI** reporting application for an enterprise client by replacing a chatbot-based flow with an upload-based report hub, implementing dynamic brand and report-type selection through **2 APIs**, routing report-generation requests to the appropriate endpoints, troubleshooting CORS and file-download header issues, and identifying unused APIs for cleanup.
- **Collaboration & Delivery:** Collaborated with technical leads, QA, and business **stakeholders** in requirement and review meetings. Maintained task trackers, **technical documentation**, status updates, and **Git/GitHub** branching workflows.

Software Engineer

26/08/2025 - 15/04/2026

Peerbits Solutions Pvt. Ltd, Ahmedabad, IN

- Built and maintained a production **Magento 2** eCommerce store end-to-end (200+ SKUs), integrating **PayPal, Razorpay, GPay** and card gateways with secure transaction handling.
- Customized Magento themes and modules and engineered order, shipping and payment workflows covering multi-carrier shipping rules, tax calculation and order-state transitions.
- Designed, built and published two custom Magento 2 extensions on the **Adobe Commerce Marketplace** — a Product Finder module and a Global Price & Stock Updater that cut manual price-update time by an estimated **60%**.

Full Stack Developer *01/07/2023 - 31/07/2025*

Aminsoftech, Ahmedabad, IN

- Designed and built a full-stack eCommerce platform — **Flask/Python** REST backend with **React.js** frontend, cart, checkout and CRM layer — backed by **SQLAlchemy** models on **MySQL**.
- Integrated **Stripe** with a signed webhook system for secure payment confirmation and automated seller payout tracking, cutting manual reconciliation effort by an estimated **40%**.
- Architected and documented **REST APIs** (15+ endpoints) with JWT authentication, input validation and CORS configuration, plus product, wishlist and stock-validation logic.
- Built real-time buyer-seller chat with **SocketIO**; designed a multi-role booking workflow with JWT role authorization, Stripe Connect split payments, SendGrid email notifications and Twilio SMS OTP verification.
- Deployed and maintained the application on **AWS** (environment config, database migrations, bug fixes from user feedback), maintaining an estimated **99% uptime**. LINK : Medium article

EDUCATION

Master's in Computer Application (MCA) — GLS University, Ahmedabad, IN • GPA: 8.4 *2023 - 2025*

Bachelor of Computer Application (BCA) — Gujarat University, Ahmedabad, IN • GPA: 8.3 *Jul 2021 - Mar 2023*

CERTIFICATIONS

- Generative AI Applications with Amazon Bedrock — Coursera, authorized by Amazon Web Services (AWS) — May 29, 2026
- Machine Learning Intern Completion Certificate — Cognifyz Technologies — 20/09/2025
- Web Development Project Certificate — Infolabz IT Services — 2022-2023
